Audit Services

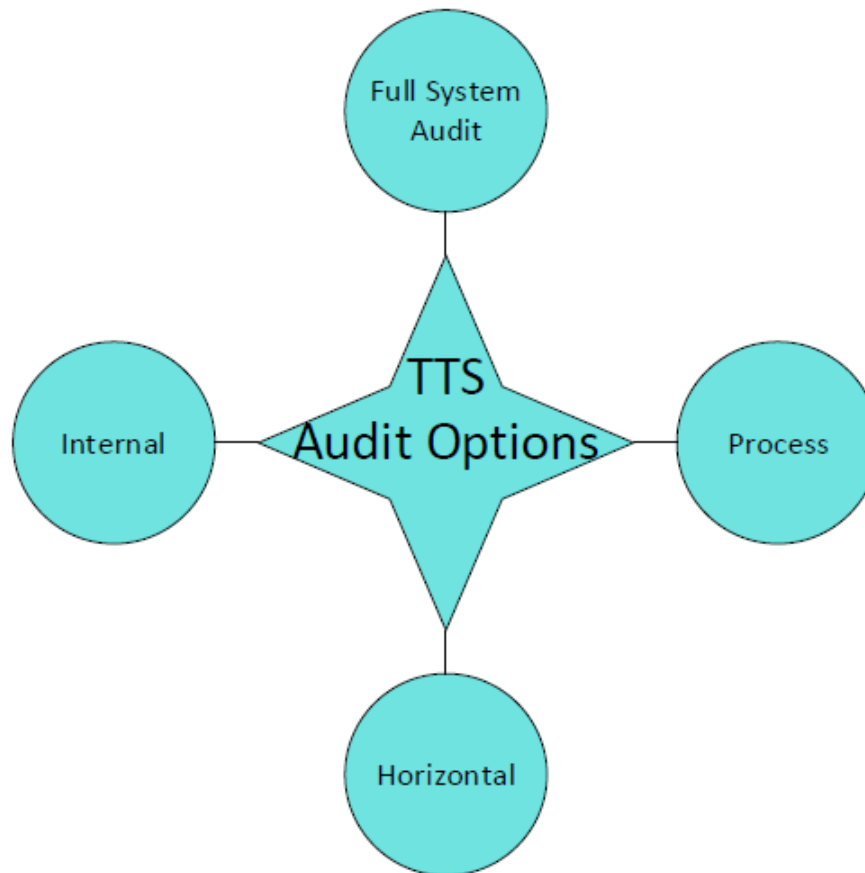

Our Audit Services

We offer a wide range of traditional and bespoke audit solutions. Audits are planned and delivered by internationally recognised auditors using the latest good practices, applying remote methodologies as appropriate. All audits are based on ISO 19011:2018 *Guidelines for auditing management systems*.

System audits of your Quality Management System can be arranged:

- As part of a gap analysis of your business arrangements for constructing an effective QMS
- For checking that planned arrangements of your QMS are being implemented effectively, with consistent results in line with your business objectives and strategic direction
- As preparation for ISO certification e.g. ISO 9001:2015

Internal audits conducted on behalf of your business in line with your own arrangements or planned and delivered by us

Process audits check whether:

- your activities are being performed as planned
- resources are being effectively utilized
- desired or required results are being achieved

Horizontal audits can look at any project arrangement, management system element or arrangements. Extremely useful as they cross functional boundaries therefore adding additional value to these audits.
